Prohibition was revoked vide notification G.S.R. 520 (E) dated 31.07.2013 for the use of drug Pioglitazone and all drug formulations containing Pioglitazone subject to following conditions as specified below:

“Pioglitazone and all formulations containing Pioglitazone for human use is allowed to be manufactured for sale, sale and distribution subject to the condition that the manufacturers shall mention the following on their package insert and promotional literature of the drug;”

1. The drug should not be used as first line of therapy for diabetes.
2. The manufacturer should clearly mention following box warning in bold red letters.

Advice for healthcare professionals:

- Patients with active bladder cancer or with a history of bladder cancer, and those with uninvestigated haematuria, should not receive Pioglitazone.
- Prescribers should review the safety and efficacy of Pioglitazone in individuals after 3-6 months of treatment to ensure that only patients who are deriving benefit continue to be treated. Pioglitazone should be stopped in patients who do not respond adequately to treatment (eg. reduction in glycosylated haemoglobin HbA1c).
- Before starting Pioglitazone, the following known risk factors for development of bladder cancer should be assessed in individuals; age, current or past history of smoking, exposure to some occupational or chemotherapy agents such as cyclophosphamide, or previous irradiation of the pelvic region.
- Use in elderly patients should be considered carefully before and during treatment because the risk of bladder cancer increases with age. Elderly patients should start on the lowest possible dose and be regularly monitored because of the risks of bladder cancer and heart failure associated with Pioglitazone.
